

06/03/2026:
SUPERHERO MANDROID
UPGRADE TEST

TEST BLOCK 01

GRADE

1

INTACT

TEST BLOCK 02

GRADE

2

CRACKED

TEST BLOCK 03

GRADE

3

DESTROYED

Sleep paralysis
opened the door.

I had spent the day
thinking about Mandroid.

The first stop
was Leon's lab.

Johnson understood the idea fast.

Nitro for a small speed boost.

Light propulsion for a major one.

Nanites for size.

We called
in the hero.

Mandroid stood ready.

Every upgrade
needed a measure.

So the lab
built three grades.

The normal
rocket fist
hit grade one.

No damage.

Then nitro
woke up.

Grade two
cracked.

The first
benchmark
was set.

Light propulsion
changed the room.

The fist became
a comet.

Grade three could
not hold.

The upgrade
worked.

Then we tested the nanites.

Bigger fists meant heavier fists.

A slower shot.

A harder hit.

The numbers were clear.

UPGRADE TEST RESULTS

NORMAL ROCKET FIST

GRADE 1 (INTACT)

RESULT: NO DAMAGE

SPEED

SIZE

WEIGHT

NITRO ROCKET FIST

GRADE 2 (CRACKED)

RESULT: CRACKED

SPEED

SIZE

WEIGHT

LIGHT PROPULSION FIST

GRADE 3 (SHATTERED)

RESULT: SHATTERED

SPEED

SIZE

WEIGHT

NANITE FIST

RESULT: EXTREME DAMAGE

TRADE-OFF: HIGH WEIGHT

WEIGHT OVERLOAD
AIMING DIFFICULTY: HIGH

SPEED

SIZE

WEIGHT

OVERALL ANALYSIS

LIGHT PROPULSION = FASTEST / HIGHEST DAMAGE

NITRO = BALANCED OPTION

NANITES = MAX DAMAGE / HIGH WEIGHT PENALTY

TEST DATE

06/03/2026

STATUS

CAUTIOUS
SUCCESS

Speed, size, and weight all mattered.

PERFORMANCE SUMMARY

DAMAGE OUTPUT

WEIGHT LOAD

Mandroid needed training.

TRAINING MODE

CONTROL

POWER

NEXT PHASE: NIGHTMARE READINESS

But the upgrades were a success.
