

THE
FICTIONNITE
PLOT PROBLEM

JULY 21, 2026

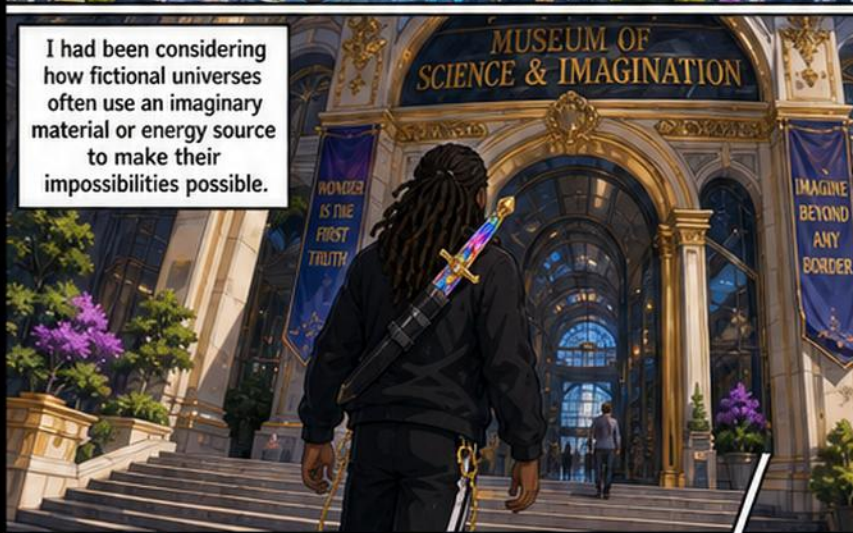

I induced lucidity through sleep paralysis and arrived alone in another unfamiliar Storyverse city.

Many recent dreams had begun with me flying through cities using superpowers, but this time I chose to enter a museum.

I had been considering how fictional universes often use an imaginary material or energy source to make their impossibilities possible.

With that idea in mind, I imagined Fictionite: a rare crystal that allowed fictional impossibilities to exist.

Inside the museum, I found a Fictionite crystal waiting in a glass display case.

A gang of highly advanced robotic bikers suddenly crashed through the museum wall in futuristic leather jackets.

Their leader smashed the display case and stole the Fictionite crystal.

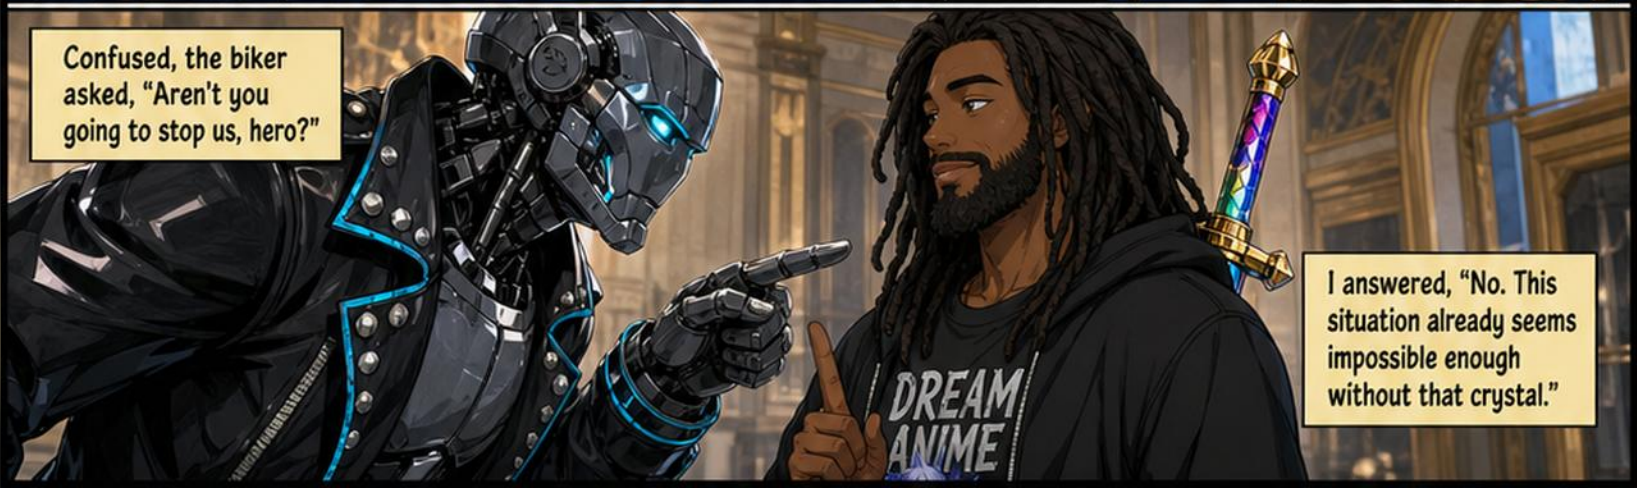

He raised the crystal triumphantly while the gang struck threatening poses amid bikes and debris.

I did not attempt to stop him.

Confused, the biker asked, "Aren't you going to stop us, hero?"

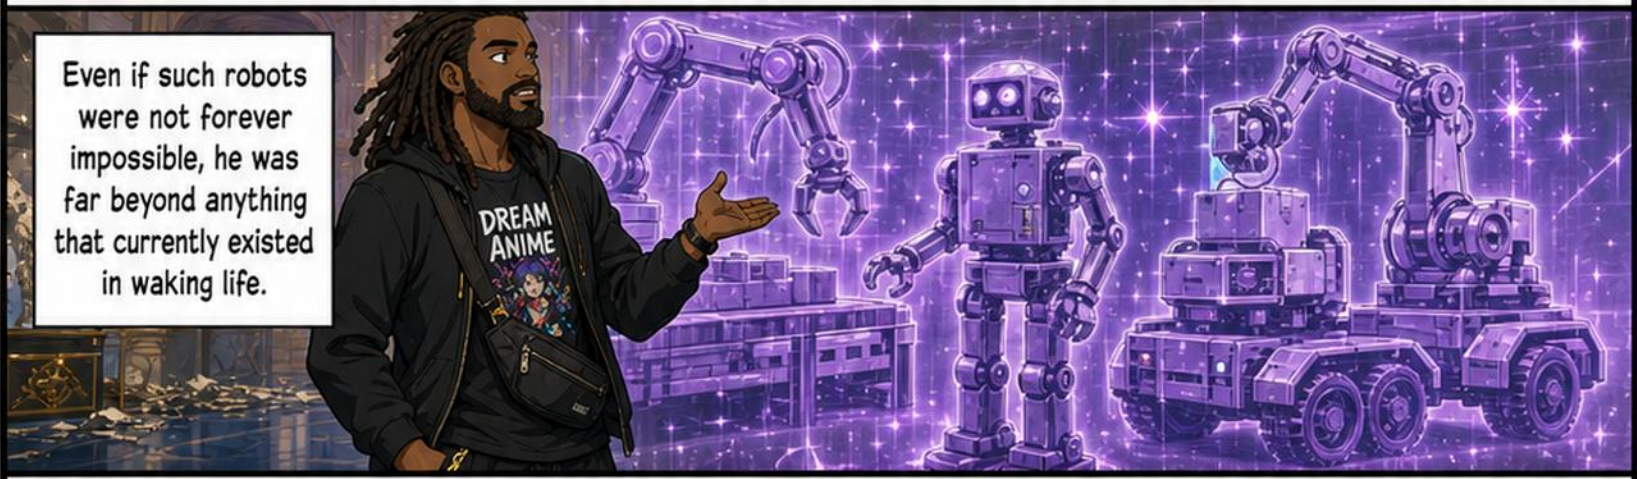

I answered, "No. This situation already seems impossible enough without that crystal."

I explained that waking-world robots were nowhere near as advanced as a machine that could think, speak, and behave exactly like him.

Even if such robots were not forever impossible, he was far beyond anything that currently existed in waking life.

That meant his own body, mind, and motorcycle probably already depended on Fictionite—or on the same kind of fictional impossibility.

The entire world around us might already be partly composed of it.

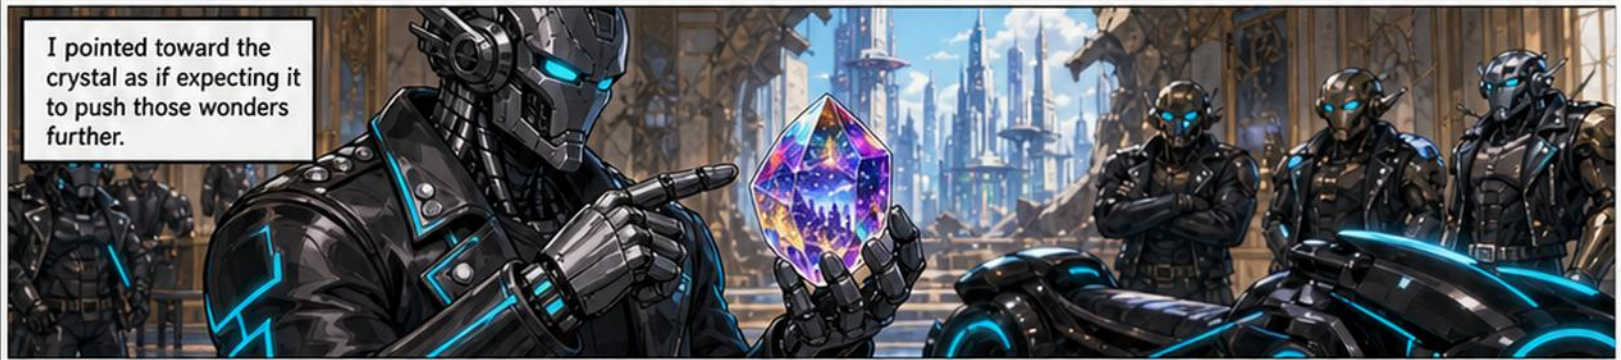

So I asked the question the heist had avoided:
“What will that crystal actually allow you to do?
What will it change?”

The biker reasoned that if Fictionite made impossible things possible, possessing one crystal should let him perform even more impossible feats.

I pointed toward the crystal as if expecting it to push those wonders further.

I told him that "more impossible" did not identify a power, a goal, or a useful change.

Neither of us could imagine what he considered more impossible than everything already surrounding us.

For the first time, the biker began to wonder whether stealing Fictionite was worthwhile.

Before the biker could decide, a woman with towering feathery purple hair and a pearlescent blue fish-scale dress entered with an evil cackle.

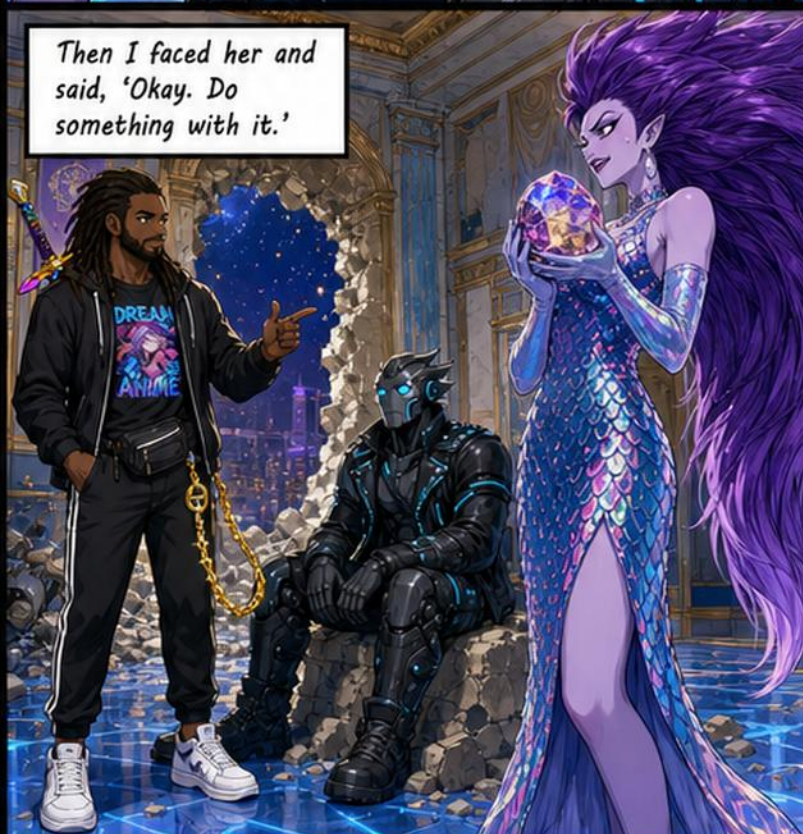

She snatched Fictionite from him and declared that she would show us its true power.

I told the robotic biker to watch.

Then I faced her and said, 'Okay. Do something with it.'

She stared at me and asked, 'What?'

I repeated the challenge: demonstrate one useful thing the crystal let her do that she could not have done before.

I explained that I could already do essentially anything. Fictionite gave her no clear advantage, and if she used it dangerously, I could simply stop her.

To demonstrate my point, I summoned a large collection of balloons.

Then I created an enormous chocolate ice cream cake covered in fluffy white frosting, plus a second cake just for myself.

I summoned an entire crowd, and the museum transformed into a full birthday party without Fictionite doing anything at all.

The purple-haired woman panicked, dropped the crystal, and ran away.

I told the biker that stealing Fictionite simply did not make sense as a plot.

Neither villain had known what the crystal could accomplish, especially in a world where impossible things already happened constantly.

The expected battle ended because one direct question exposed the emptiness behind the threat.

The robotic biker and I stayed at the birthday party together, and the untouched Fictionite changed nothing.

I ate some of the chocolate ice cream cake. It tasted pretty good.
